

Authentication & Profile Management

Sprint 1 Presentation

Team Codacaine — Nasiphi Ntontela

COMS3011A Project 7

What we were asked to deliver

From the Sprint 1 backlog and project brief:

- Secure **sign-in / sign-up**
- Multiple **authentication providers**
- **Password reset** capability
- **Protected routes**
- **User profile** management
- **Account deletion**

Authentication providers

Provider	Flow
Google OAuth	One-click sign-in; account auto-created
GitHub OAuth	One-click sign-in; account auto-created
Email / Password	Sign-up → confirmation email → sign-in
Magic link	Click for sign-in; email link; account auto-created

Tech stack: Supabase Auth + Brevo SMTP

Sign-in UX

- Split-screen design with video showcase
- Glassmorphism cards on dark background
- OAuth buttons + email/password form
- Smart post-auth routing:
 - New user → `/create-profile`
 - Returning user → `/dashboard`

Email confirmation flow

1. User enters email + password
2. Supabase creates the account
3. **Brevo SMTP** sends confirmation email
4. User clicks the confirmation link
5. Account activated → user can sign in

We fixed an early issue where confirmation emails were not sending because custom SMTP was not enabled in Supabase.

Password reset flow

1. User clicks "Forgot password?"
2. Enters their email
3. Receives reset link (1-hour expiry)
4. Clicks link → `/auth/update-password`
5. Sets new password with strength meter
6. Redirected to dashboard on success

Protected routes

- `ProtectedRoute.tsx` guards authenticated pages
- Unauthenticated users are redirected to `/signin`
- Session managed globally via `AuthContext.tsx`
- Auth state persists across reloads

Profile menu & settings

Avatar dropdown gives quick access to:

- Name / email display
- Manage Profile
- Settings
- Sign out

Settings panel has three tabs:

1. **Profile** — preferred name, role, student number, bio
2. **Preferences** — default view, week start, time format, auto-save, compact mode, notifications
3. **Account** — email, sign-in method, password reset, delete account

Account deletion & restoration

- User clicks "Delete Account" in Settings
- Account is soft-deleted
- 30-day grace period begins
- User is signed out immediately
- During grace period, sign-in shows a restore prompt
- Restore requires clicking a confirmation link sent to the account email
- After 30 days, a scheduled Supabase function permanently purges the account

Architecture & code quality

Layer	Technology
Frontend	React 19 + TypeScript + Vite
Auth	AuthContext + Auth
Backend service	<code>auth-service</code> (Express)
CI/CD	GitHub Actions

Tests added in Sprint 1:

- `auth-service` routes — Jest + Supertest
- `AuthContext` — Vitest + React Testing Library

CI/CD:

- Gitea Actions runs lint, build, and tests on every push

Live demo

1. Show the sign-in page design
2. Sign in with email/password or OAuth
3. Show the dashboard greeting
4. Open profile menu → Settings
5. Walk through Profile, Preferences, and Account tabs
6. Mention password reset and account-deletion grace period

Questions?

Thank you
